

Standard Operating Procedure: Drop-offs Protocol and Scheduling Procedures

Effective Date: April 10, 2026

Review Date: March 17, 2027

Scope: Clinical Operations & Administrative Staff

Purpose and Strategic Objective

The objective of this SOP is to standardize the scheduling of blood draws and specimen drop-offs across all operational regions (SoCal, NorCal, and Reno). By implementing strict regional days and a two-phase scheduling protocol, the company ensures maximum route efficiency, technician/courier carpooling optimization, and ISO-compliant documentation of patient service windows.

2. Regional Operational Windows

To ensure resource optimization, staff must strictly adhere to the designated service days for each region.

Region	Operational Days	Service Breakdown	Time Window Standards
SoCal	Tuesday – Friday	Tue: Blood Draws Only	Blood Draws: 1-Hour Window Drop-offs: 2-Hour Window
		Wed/Thu: Blood Draws & Drop-offs	
		Fri: Drop-offs Only (Overflow)	
NorCal	Thursday – Friday	Thu: Blood Draws Only	Blood Draws: 1-Hour Window
		Fri: Drop-offs Only	Drop-offs: 2-Hour Window
Reno	Monday – Tuesday	Mon: Blood Draws Only	Blood Draws: 1-Hour Window
		Tue: Drop-offs Only	Drop-offs: 2-Hour Window

3. Scheduling Protocol (The "Unified Route" Method)

To minimize operational costs and prevent logistical gaps, scheduling must follow a two-phase process in **Routific**.

3.1 Phase I: Initial Route Creation & Consolidation

- Unified Itinerary:** All Drop-offs (D/O) and Blood Draw appointments must initially be scheduled under the **Technician’s Itinerary**.
- Objective:** This ensures the software calculates a single, seamless route for the carpooling team, eliminating unnecessary travel time and overlapping geographical zones.

- **Window Compliance:** Schedulers must ensure the mandatory **1-hour buffer** for blood and **2-hour buffer** for drop-offs are programmed into the initial route.

3.2 Phase II: Final Route Separation & Courier Handover

Once all appointments are confirmed and the scheduling window for the day is closed:

- **Transfer Protocol:** All confirmed Drop-offs must be moved from the Technician's route to the **Separate Courier Route**.
- **Audit Compliance:** This separation is required to ensure that specimen handling and courier-specific tasks are tracked independently for quality control.
- **Resource Optimization:** This secondary phase is a critical step to conserve the volume of "Free Orders" utilized within the Routific system.

4. Operational Buffer Rules

Failure to adhere to these windows results in a breach of the "Architect Phase" standards:

- **Blood Draw Window:** Technicians are allotted a **1-hour strict window** per patient to account for collection and documentation.
- **Drop-off (D/O) Window:** Couriers are allotted a **2-hour strict window** to account for transit, facility check-in, and specimen handover.

5. ISO Audit Readiness & Quality Control

- **Documentation Stamps:** All schedules exported from Routific must be verified against the regional table in Section 2.
- **Route Verification:** The Clinical Front-end & Field Technicians Manager must review the "Unified Route" before the "Final Separation" to ensure no patient was missed during the transition.
- **Data Sovereignty:** Ensure that the 5 Patient Identifiers are accurately reflected in the Routific notes for both Technician and Courier views.
