

Standard Operating Procedures: HVA Troubleshooting Guide

Version: 1.0

Effective Date: April 10, 2026

Review Date: April 06, 2026

Scope: Clinical Operations & Administrative Staff

1. Route Management & Scheduling (Routific)

Navigating logistics requires precision to avoid "cascading delays" that disrupt the entire day's schedule.

- **Regional Constraints:** You must only schedule within these blocks unless you have mandatory approval from the CEO:
 - **SoCal:** Tuesday, Wednesday, and Thursday (Friday is for overflow only).
 - **Reno & NorCal:** Monday and Tuesday of alternating weeks.
- **Buffer Policies**
 - **Courier Deliveries:** Maintain a 2-hour buffer from the previous appointment.
 - **Technician Blood Draws:** Maintain a 1-hour buffer window.
 - **The 5-Minute Rule:** If an appointment is at 9:00 AM, edit the time window to 9:00–9:05 AM in the order settings to ensure route accuracy.
- **Common Route Fixes:**
 - **Missing Address:** Ensure the address is entered in the Drop-off Settings field.
 - **Wrong "Type":** Verify the "Type" isn't accidentally set to "Service" if it is meant to be a "Delivery".
 - **Duration Adjustments:** The system defaults to 30 minutes for drop-offs; you must manually change this to 15 minutes.

Problem: The address isn't showing up in the route.

Solution: Ensure the address is entered in the Drop-off Settings field. Double-check that you haven't accidentally set the "Type" to "Service" if it's meant to be a delivery.

Problem: I forgot to add the 5-minute buffer for the time window.

Solution: Go back to the order and edit the Time Windows. If the appt is at 9:00 AM, always change it to 9:00 – 9:05 so the technician's route remains accurate.

Problem: The technician doesn't know where to park or how to enter.

Solution: Check if you included the Apartment Number or specific Patient Requests in the Notes section. If not, update it immediately so it syncs to their mobile app.

2. Trello Workflow & Patient Tracking

The "Golden Rule" for HVAs: If a patient's status changes in real life, their card must move in Trello immediately.

- **Patient Identification (PID):** To create a PID, use the patient's Date of Birth and reverse it to YYYYDDMM (e.g., March 10, 1985, becomes 19851003).
- **Column Management:**
 - **PRP Patients:** Once scheduled, move them to the Approval Column immediately so the required kit can be ordered.
 - **Unresponsive Patients:** If a patient hasn't answered for 3 days, move the card to the "No recent orders" column (Do not delete).
 - **Billing Checks:** If a patient hasn't been charged, check the Billing Column. If the card is still in "Scheduled," the billing department hasn't been notified.
- **Finding Information:**
 - **Doctor Contacts:** Switch to the Doctor List Board.
 - **Office Details:** Switch to the Facilities Board

Trello Card & Column Confusion

- **Problem:** I can't find a doctor's contact information.
 - *Solution:* Switch from the "Enrich Front Office" board to the Doctor List Board for a fast search, or the Facilities Board for full office details.
- **Problem:** A patient hasn't answered for 3 days.
 - *Solution:* Move the card from the Waiting Room to the "No recent orders" column. Do not delete the card; we keep it for future reference.
- **Problem:** I don't know the Patient Identification (PID) number.
 - *Solution:* Look at the Date of Birth on the card and reverse it (YYYYDDMM). For example, a birthday of March 10, 1985, becomes 19851003.

3. Workflow "Stick Points"

- **PRP Scheduling:** Remember that PRP patients require a kit order. Move them to the Approval Column as soon as they are scheduled so the kit can be submitted.
- **Billing Sync:** If a patient calls asking why they haven't been charged, check if their card is in the Billing Column. If it's still in "Scheduled," the billing department hasn't been notified yet.
- **Refill Errors:** If the "Automation" button doesn't appear, ensure you are in the Drop Off Column and the delivery is marked as complete.

The "Golden Rule" for New HVAs

"If a patient's status changes in real life, their card must move in Trello immediately.

Troubleshooting Guide: Audit Mismatch & Resolution

.Audit Mismatch & Resolution Matrix

As an HVA, you act as the "anchor" for clinical data integrity. Use this matrix for discrepancies:

Scenario	Issue	Resolution Action
POD Mismatch	Photo in the Tech or Courier Trello boards does not match the requisition.	Immediate Stop. Contact the field technician to verify the location/photo before moving the Trello card to billing.
Data Discrepancy	Trello PX card data differs from the intake documentation.	Audit original original intake forms. Correct Trello card to reflect validated Trello data.
Scheduling Conflict	Tech is delayed by traffic/road issues.	Call the patient immediately using the "Patient Unavailable" script to reschedule within business hours.
Automation Error	"Automation" button won't appear for refills.	Ensure the card is in the Drop Off Column and the delivery is marked as complete.

Critical Success Factor

Critical Safety & Compliance

- **Technician Safety:** Never schedule a drop-off outside of normal business hours, even if there are delays.
- **Photo Verification:** Since we are no longer using WorkWave, always ensure the photo is attached directly to the patient's card on the respective Trello board (Tech or Courier) before proceeding
- **Documentation Standards:** Always check for Apartment Numbers or specific Patient Requests in the Notes section so they sync to the technician’s mobile app.
- **Timeline:** Routes should only be assigned a driver and published the day before the scheduled route.
- **Safety First:** If a mismatch or scheduling issue forces a drop-off to push late, never schedule outside of business hours. Communication with the patient is the priority to ensure technician safety and service alignment.
- **The Golden Rule:** If a patient's status changes in real life, their card must move in Trello immediately
